

Which λ readout reports TRUE recovery? mirror probe-truth campaign — branch_evidence: ADOPT-consistent (amended scope, card § 9)

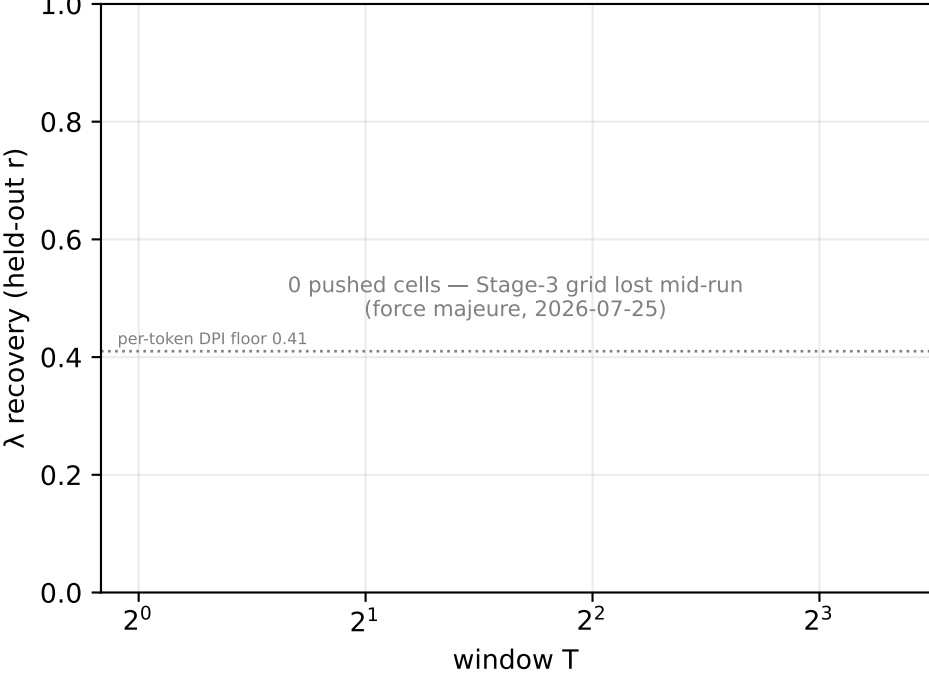

line C — TXC-pre, $k_{\text{pos}} 8$, $d_{\text{sae}} 2048$ ($p/n = 1.00$ at T16;
matched to the real panel in p/n AND window density)

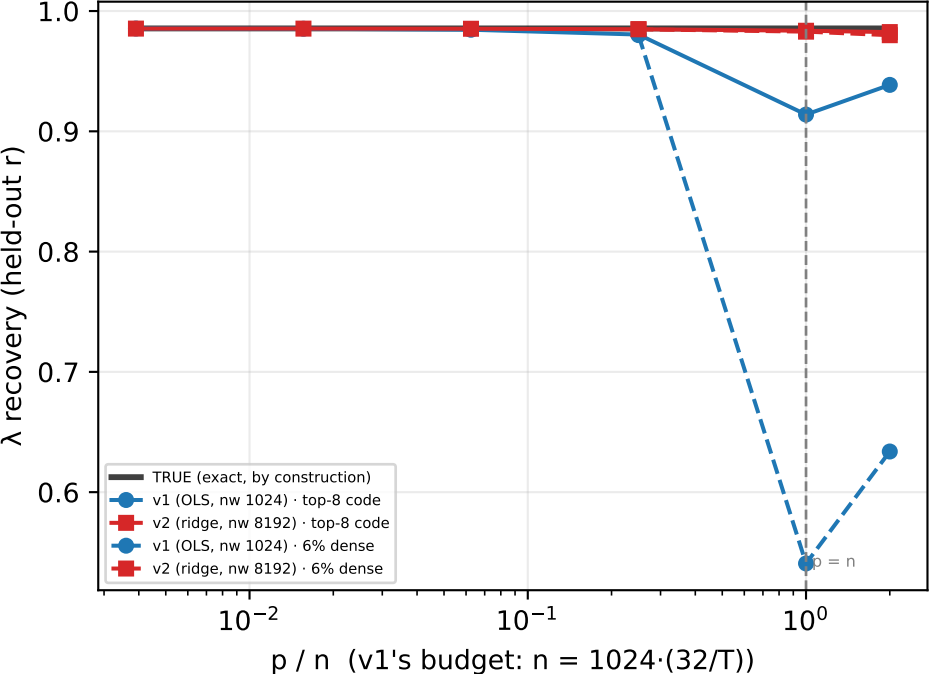

line P — matched TXC-post, nominal $k = 8 \cdot T$
(runpod-d's code-rate convention)

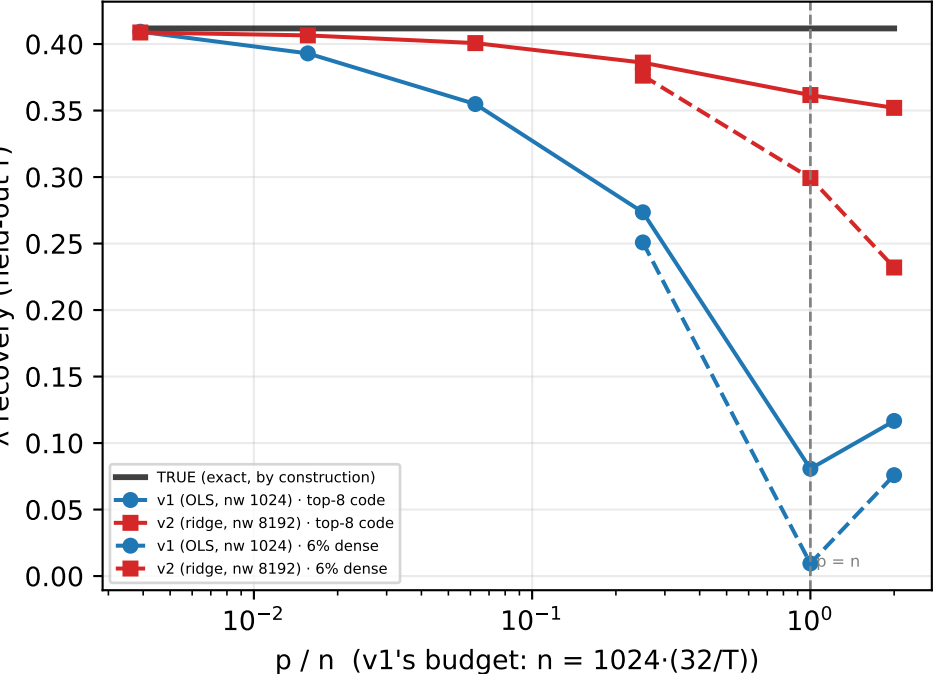

line M — mirror-canonical control ($d_{\text{sae}} 20$, $p/n \leq 0.010$)
line S — Stacked, $p = T \cdot d_{\text{sae}}$ ($p/n = 4.0$ at T16)

Stage 1 constructed code — full arm (truth known exactly)

Stage 1 constructed code — token arm (truth known exactly)

trained mirror ladder — deviation from truth (licensed cells)
