T (window length)

paper RLHF TXC arm = agentic_txc_02 (class MatryoshkaTXCDRContrastiveMultiscale: matryoshka+contrastive, multiscale [1,2,3], per-window TopK→ReLU, k_win=500; distinct from txc_pro); exhibit = plain-TXC modernization at paper window budget (k_win=100·T; POST composition preserves per-window granularity). T-sweep/shuffle conclusions are statements about the plain arm.
